## **AMENDMENTS TO THE CLAIMS**

1-24. (Canceled)

25. (Currently Amended) A method for managing a defective area of a recording medium having a data area, a lead-in area and a lead-out area, the method comprising:

detecting a defective unit during reproducing or recording operation;

recording the data of the defective unit in a replacement unit; and

recording defect management information in a defect management area, the defect management information including locator information, the locator information indicating positions of the defective unit and the replacement unit,

wherein the defect management area includes a first part and a second part, the first part is used to record therein defect management information generated during a recording operation and the second part is used to record therein defect management information generated during a reproducing operation, and

wherein the defect management information generated during the recording operation includes position information of a defective unit and a corresponding replacement unit, and the defect management information generated during the reproducing operation includes position information of a defective unit and a corresponding replacement unit.

- 26. (Previously Presented) The method as claimed in claim 25, further comprising: recording an access pointer in the defect management area, the access pointer indicating position of the defect management information.
- 27. (Previously Presented) The method as claimed in claim 26, wherein the first and the second parts of the defect management area are assigned in the lead-in area respectively.
- 28. (Previously Presented) The method as claimed in claim 27, wherein the replacement unit is included in a spare area, and the spare area is assigned in the data area.

Docket No.: 0465-1055P

- 29. (Canceled)
- 30. (Canceled)
- 31. (Currently Amended) A method for managing a defective are of a recording medium having a data area, a lead-in area and a lead-out area, the method comprising:

detecting a defective unit during reproducing or recording operation;

recording the data of the defective unit in a replacement unit;

recording a defect entry in a defect management area, the defect entry including locator information indicating positions of the defective unit and the replacement unit; and

recording an access pointer in the defect management area, the access pointer indicating position of defect management information including the defect entry,

wherein the defect management area includes a first part and a second part, the first part is used to record therein defect management information generated during a recording operation and the second part is used to record therein defect management information generated during a reproducing operation, and

wherein the defect management information generated during the recording operation includes position information of a defective unit and a corresponding replacement unit, and the defect management information generated during the reproducing operation includes position information of a defective unit and a corresponding replacement unit.

- 32. (Previously Presented) The method as claimed in claim 31, wherein the first and the second parts are assigned in the lead-in area respectively.
  - 33. (Canceled)
- 34. (Previously Presented) The method as claimed in claim 31, wherein the replacement unit is included in a spare area, and the spare area is assigned in the data area.

Docket No.: 0465-1055P

35. (Canceled)

36. (Currently Amended) A recording medium comprising:

a data area including a spare area, the spare area including a replacement area;

a lead-in area; and

a defect management area, the defect management area including a first part and a second

part,

wherein the first part is used to record therein defect management information generated

during a recording operation, and the second part is used to record therein defect management

information generated during a reproducing operation, and

wherein the defect management information generated during the recording operation

includes position information of a defective unit and a corresponding replacement unit, and the

defect management information generated during the reproducing operation includes position

information of a defective unit and a corresponding replacement unit.

37. (Previously Presented) The recording medium as claimed in claim 36, wherein the

second part of the defect management area is assigned in the lead-in area, and the first part and

the second part of the defect management area are assigned separately.

38. (Previously Presented) The recording medium as claimed in claim 36, wherein the

second part of the defect management area is assigned in the data area, and the second part of the

4

defect management area includes at least one sub defect management area.

39. (Canceled)

40. (Canceled)

41. (Currently Amended) A method for managing a defective unit of a recording medium

having a data area, a lead-in area and a lead-out area, the method comprising:

detecting a defective unit during reproducing or recording operation;

recording the data of the defective unit in a spare area; and

recording defect management information in a defect management area, the defect

management area including a first part and a second part, the time for using the first part being

different from the time for using the second part,

wherein the first part is used to record therein defect management information generated

during a recording operation, and the second part is used to record therein defect management

information generated during a reproducing operation, and

wherein the defect management information generated during the recording operation

includes position information of a defective unit and a corresponding replacement unit, and the

defect management information generated during the reproducing operation includes position

information of a defective unit and a corresponding replacement unit.

42. (Previously presented) The method as claimed in claim 41, wherein the first part and

the second part of the defect management area are assigned in the lead-in area separately.

43. (Previously presented) The method as claimed in claim 41, wherein the first part of

the defect management area is assigned in the lead-in area and the second part of the defect

management area is assigned in the spare area.

44. (Currently Amended) A recording medium comprising:

a data area including a spare area, the spare area including a replacement area;

a lead-in area; and

a defect management area, the defect management area including a first part and a second

part, the time for using the first part being different from the time for using the second part,

5 EHC/ktp

wherein the first part is used to record therein defect management information generated

during a recording operation, and the second part is used to record therein defect management

information generated during a reproducing operation, and

wherein the defect management information generated during the recording operation

includes position information of a defective unit and a corresponding replacement unit, and the

defect management information generated during the reproducing operation includes position

information of a defective unit and a corresponding replacement unit.

45. (Previously presented) The method as claimed in claim 44, wherein the first part and

the second part of the defect management area are assigned in the lead-in area separately.

46. (Previously presented) The method as claimed in claim 44, wherein the first part of

the defect management area is assigned in the lead-in area and the second part of the defect

management area is assigned in the spare area.

47. (Previously presented) The method as claimed in claim 25, wherein the first and

second parts are assigned in the data area.

48. (Previously presented) The method as claimed in claim 31, wherein the first and

second parts are assigned in the data area.

49. (Previously presented) The recording medium as claimed in claim 36, wherein the

first and second parts are assigned in the data area.

50. (Previously presented) The method as claimed in claim 41, wherein the first and

second parts are assigned in the data area.

51. (Previously presented) The recording medium as claimed in claim 44, wherein the

first and second parts are assigned in the data area.
